

Kasper Mork Lunde

AI & Product Designer | Oslo, Norway | (+47) 970 96 782 | kasperml@hotmail.com | linkedin.com/in/kasperlunde

Product and AI designer who builds interactive systems that respond to humans. Hands-on experience designing AI agents with dynamic personality controls, configuring parameters across multiple language models, and shipping production RAG systems with custom moderation. Gameplay programming background brings a different angle on AI design: dialogue trees, branching narrative, and agent behavior are the same problem at different levels of abstraction.

EXPERIENCE

Product Designer (AI Designer)

Attensi, Oslo | February 2025 - Present

- Design the interaction model for FAST Assistant, Attensi's customer-facing AI agent. Built the slider-based personality system that lets super-users configure agent behavior across five dimensions without writing prompts.
- Architect prompt assembly pipelines in Flowise that compose lean, predictable prompts from structured inputs, with input moderation and RAG against customer-uploaded knowledge documents.
- Designed the hallucination guardrails that restrict the agent to customer documentation. The system has been red-team tested with role-play attacks, prompt injection, and system-prompt-leak attempts.
- Evaluate and benchmark GPT-4, Claude, and Gemini for production use, weighing reasoning quality, latency, and cost trade-offs.
- Document prompt engineering best practices and support cross-functional teams in AI adoption.

Gameplay Developer

Attensi, Oslo | November 2021 - February 2025

- Shipped every Attensi Operations / ShopSim project the company delivered. Performance optimization, gameplay logic, and integration work between writers, artists, designers, and customers.
- Built complex dialogue and NPC behavior systems with branching narrative and context-sensitive content using Unity and an in-house node-based programming tool.
- Defined cross-team best practices for the product line, including handover conventions and performance standards. Cumulative result was a 3x performance improvement and 50% faster content production.
- Optimized scenes for a minimum spec of iPhone 8+, including texture, lighting, and memory work.

Gameplay and Network Programmer

Hyper Games, Oslo | May 2019 - December 2019

- Shipped gameplay code on Morkredd, winner of Game of the Year, Best Game Design, and Best Art at the Nordic Game Awards 2021.
- Ran a one-month online co-op prototype using Photon, identified that the codebase could not support it without a physics-layer rewrite, and recommended the feature not ship.

- Ported Morkredd to iOS and iPad for Apple Arcade's launch. Lead programmer on Mosaic: BlipBlop, the tie-in app for Krillbite's Mosaic, shipped as both a standalone iOS/Android app and a diegetic in-game app.

Lecturer

Kristiania University College, Oslo | October-November 2020 and October-November 2023

- Taught game design and Unreal Engine to two cohorts of 12-14 students.

EDUCATION

BA in Game Design, Westerdals Oslo ACT (now Kristiania University College), 2018. Thesis: lead gameplay programmer on a 3D physics-based Unity game with a light-orb mechanic.

SKILLS

AI and Prompt Engineering: Prompt engineering, agentic workflows, RAG, function calling, chain-of-thought reasoning, few-shot learning, model evaluation across GPT, Claude, and Gemini, Flowise, Qdrant, OpenAI embeddings, prompt caching.

Design and Product: Interaction design, design systems, cross-functional collaboration with writers, artists, and product owners, Figma, prototyping in code.

Engineering: Unity (expert, 6+ years), Unreal Engine, C#, dialogue and branching narrative systems, Python, Next.js, Supabase, Vercel.

Daily Tools: Claude, Claude Code, Claude Design, ChatGPT, Codex, Cursor, Flowise.

LANGUAGES

Norwegian (native), English (C2), Spanish (B1).
