

Kasper Mork Lunde

Gameplay Developer | Oslo, Norway | (+47) 970 96 782 | kasperml@hotmail.com | linkedin.com/in/kasperlunde

Gameplay developer with a game design background and credits on award-winning titles. Shipped gameplay code, console ports, and broader QA on Morkredd (Nordic Game of the Year 2021). Built training simulations in Unity for four years at Attensi, then moved sideways into AI design while continuing to support the games-led product line. Comfortable across the full game development loop and increasingly interested in where AI agents and interactive narrative meet.

EXPERIENCE

Gameplay Developer

Attensi, Oslo | November 2021 - February 2025 (ongoing support)

- Shipped every Attensi Operations / ShopSim project the company delivered. ShopSim is a retail and convenience-store training simulation built in Unity, shipped to hospitality and retail clients on mobile (minimum specification iPhone 8+).
- Built dialogue and NPC behavior systems with branching narrative using Unity and an in-house node-based logic tool with a constrained palette of nodes.
- Sat at the integration point between writers, 3D artists, product managers, and customers. Filtered requests, smoothed handovers, and assembled the pieces into something that played well.
- Owned scene optimization across the product line: texture and material work, lighting, memory, and import pipeline. Defined cross-team conventions that caught performance issues at handover instead of QA. Cumulative result was a 3x performance improvement and 50% faster content production.
- Still ship Operations work part-time alongside current role.

Gameplay and Network Programmer

Hyper Games, Oslo | May 2019 - December 2019

- Shipped gameplay code on Morkredd, winner of Game of the Year, Best Game Design, and Best Art at the Nordic Game Awards 2021. Released on Xbox, PC, Steam, and Apple Arcade.
- Ran a one-month online co-op prototype using Photon. Built a playable host-client demo, identified that the physics-based shadow mechanic could not sync reliably without a deterministic physics rewrite, and recommended the feature not ship.
- Ported Morkredd to iOS and iPad for Apple Arcade's launch. Lead programmer on Mosaic: BlipBlop, the tie-in companion app for Krillbite's Mosaic. Shipped on iOS and Android, also embedded as a diegetic in-game app.
- Ran broader QA across the studio.

Product Designer (AI Designer)

Attensi, Oslo | February 2025 - Present

- Designed FAST Assistant, Attensi's AI agent for learners inside training simulations. The agent uses prompt-engineered personality controls and retrieval against customer documentation to avoid hallucinations.

- Sideways extension of the gameplay developer work. AI agents with personality controls are the same shape of problem as dialogue trees with branching state. The same design instincts apply.

Lecturer

Kristiania University College, Oslo | October-November 2020 and October-November 2023

- Taught game design and Unreal Engine to two cohorts of 12-14 students.

EDUCATION

BA in Game Design, Westerdals Oslo ACT (now Kristiania University College), 2018. Thesis: lead gameplay programmer on a 3D physics-based Unity game with a light-orb mechanic.

SKILLS

Game Development: Unity (expert, 6+ years), Unreal Engine, C#, gameplay programming, dialogue and branching narrative systems, NPC behavior logic, scene optimization, mobile development, iOS/Android porting, multiplayer prototyping with Photon, console porting, broader QA, cross-team integration.

Game Design: Game design fundamentals (BA), level design, dialogue tree design, scenario scripting for training simulations, working with constrained logic systems.

AI and Adjacent: AI agent design, prompt engineering, RAG, model evaluation across GPT, Claude, and Gemini, Flowise. Increasingly applied to dialogue and NPC behavior work.

Daily Tools: Unity, C#, Unreal Engine, Figma, Cursor, Claude Code, Flowise.

LANGUAGES

Norwegian (native), English (C2), Spanish (B1).
