

Kasper Mork *Lunde*

Gameplay developer with a game design background and credits on *award-winning titles*. Shipped gameplay code, console ports, and broader QA on Mørkredd (Nordic Game of the Year 2021). Built training simulations in Unity for four years at Attensi, then moved sideways into AI design while continuing to support the games-led product line. Comfortable across the full game development loop and increasingly interested in where AI agents and interactive narrative meet.

– EXPERIENCE

Gameplay Developer · Attensi, Oslo

Nov 2021 – Feb 2025 (ongoing support)

- Shipped every Attensi Operations / ShopSim project the company delivered. ShopSim is a retail and convenience-store training simulation built in Unity, shipped to hospitality and retail clients on mobile (min. spec iPhone 8+).
- Built dialogue and NPC behavior systems with branching narrative using Unity and an in-house node-based logic tool with a constrained palette of nodes.
- Sat at the integration point between writers, 3D artists, product managers, and customers. Filtered requests, smoothed handovers, and assembled the pieces into something that played well.
- Owned scene optimization across the product line: texture and material work, lighting, memory, and import pipeline. Defined cross-team conventions that caught performance issues at handover instead of QA. Cumulative result was a 3x performance improvement and 50% faster content production.
- Still ship Operations work part-time alongside current role.

Gameplay and Network Programmer · Hyper Games, Oslo

May 2019 – Dec 2019

- Shipped gameplay code on Mørkredd, winner of Game of the Year, Best Game Design, and Best Art at the Nordic Game Awards 2021. Released on Xbox, PC, Steam, and Apple Arcade.
- Ran a one-month online co-op prototype using Photon. Built a playable host-client demo, identified that the physics-based shadow mechanic couldn't sync reliably without a deterministic physics rewrite, and recommended the feature not ship. Killing the prototype was the right call.
- Ported Mørkredd to iOS and iPad for Apple Arcade's launch. Lead programmer on Mosaic: BlipBlop, the tie-in companion app for Krillbite's Mosaic. Shipped on iOS and Android, also embedded as a diegetic in-game app.
- Ran broader QA across the studio.

Product Designer (AI Designer) · Attensi, Oslo

Feb 2025 – Present

- Designed FAST Assistant, Attensi's AI agent for learners inside training simulations. The agent uses prompt-engineered personality controls and retrieval against customer documentation to avoid hallucinations.
- Sideways extension of the gameplay developer work. AI agents with personality controls are the same shape of problem as dialogue trees with branching state. The same design instincts apply.

Lecturer · Kristiania University College, Oslo

Oct–Nov 2020 & Oct–Nov 2023

- Taught game design and Unreal Engine to two cohorts of 12–14 students.

– EDUCATION

BA in Game Design · Westerdals Oslo ACT (now Kristiania University College), 2018. Thesis: lead gameplay programmer on a 3D physics-based Unity game with a light-orb mechanic.

– SKILLS

GAME DEVELOPMENT

Unity (expert, 6+ years), Unreal Engine, C#, gameplay programming, dialogue and branching narrative systems, NPC behavior logic, scene optimization, mobile development, iOS/Android porting, multiplayer prototyping with Photon, console porting, broader QA, cross-team integration.

AI & ADJACENT

AI agent design, prompt engineering, RAG, model evaluation across GPT, Claude, and Gemini, Flowise. Increasingly applied to dialogue and NPC behavior work.

GAME DESIGN

Game design fundamentals (BA), level design, dialogue tree design, scenario scripting for training simulations, working with constrained logic systems.

DAILY TOOLS

Unity, C#, Unreal Engine, Figma, Cursor, Claude Code, Flowise.
